29 1800CST

Late on the 26th and on the 27th an arctic cold front moved through Texas. A slow moving upper level storm was slowly approaching Texas from the southwest states. The flow aloft became southwest over north Texas as the storm approached, producing overrunning conditions across the state from the 27th through early on the 29th. As surface temperatures dropped below freezing across western parts of north Texas on the 27th, a mixture of freezing rain and sleet began, and changed to snow across the extreme west the night of the 27th, continuing on the 28th. Three to five inches of snow fell across Stephens, Young, and Montague counties. One to two inches fell across Eastland, Jack, and northwest Wise counties. A mixture of sleet and freezing rain continued intermittently across the northern 2/3 of north Texas on the 28th, and as the main storm system moved across north Texas the night of the 28th and morning of the 29th, a light mixture of freezing rain, sleet, and snow fell across all of north Texas. The wintry precipitation caused hundreds of traffic accidents, with 4 fatalities resulting indirectly from the winter weather. At various times schools and businesses were closed or opened late across the region. At major airports there were numerous flight delays due to the wintry weather.
